RE: 2022 Annual Report for the UC Davis Animal Science Dairy Facilities

Enclosed are the completed documents for the submittal of the Annual Report for the UC Davis Animal Science Dairy located at the University of California, Davis for January 1, 2022 through December 31, 2022 (Attachment A). This submittal satisfies the annual reporting requirement under Waste Discharge Requirements General Order for Existing Milk Cow Dairies (Order No R5-2013-0122). **As of December 21, 2018, the Central Valley Water Board approved the merger of the UC Davis Animal Science Beef Feedlot and Beef Teaching Facility with the UC Davis Dairy under the Reissued General Order. Based on this merger, the 2022 Annual Report covers the Dairy, Beef Feedlot, and Beef Teaching Facilities.**

This submittal includes the following attachments:
Attachment A – Annual Dairy Report for 2022
Attachment B – Analytical Laboratory Reports

The following sections describe the Nutrient Management Plan, Supply Water, and Waste Management for the UC Davis Animal Science Dairy Facilities. No parcels have been used for land application for at least 5 years.

Nutrient Management Plan

The Nutrient Management Plan (Plan) was last updated in 2015. The Plan was prepared and approved by a certified nutrient management specialist, and a copy is maintained on-site. The Plan was not updated with the recent facility merger discussed above, as the facilities have no active land application activities, nor any plans for the future.

Supply Water

Supply water for the production facility is provided by the campus domestic water supply system. Supply water comes from six on-campus wells and surface water from the Sacramento River. UC Davis tests the campus domestic water supply (Water System No. 5710009) as required by the United States Environmental Protection Agency and the State Water Resources Control Board Division of Drinking Water. The analytical data for the supply water is included in Attachment B. The supply water utilized at the Dairy Facilities is for animal consumption only. Supply Water was not utilized for irrigation on adjacent properties (G-tract). No irrigation water was used for the G-tract parcel planted with wheat hay, and therefore no sample was collected for nitrate-nitrite in 2022.

Waste Management

Liquid waste and stormwater runoff from the Animal Science Dairy production facility and Beef Feedlot discharge to the sanitary sewer, which is treated by the campus National Pollutant Discharge Elimination System (NPDES) permitted Waste Water Treatment Plant (Permit # CA0077895). Updated Waste Management Plans were submitted to the Central Valley Regional Water Quality Board in March of 2019 for the Beef Feedlot and the Beef Teaching Facility. Manure was not applied to land during 2022 but was manifested off-site to a farm. Therefore, no stormwater discharge samples were collected. The stockpiled manure was sampled twice in 2022 and is presented in Attachment B. At the time of report submission, UC Davis is trying to obtain the manure manifest from Bullseye Farms. UC Davis will submit the manure manifest as soon as we receive it.
