Annual Report - General Order No. R5-2007-0035
Reporting period 01/01/2023 to 12/31/2023.

ADDITIONAL NOTES

A. NOTES

Precipitation utilized during winter months to meet forage freshwater requirements.

Heavy rains during the winter season allowed for a greater amount of surface water allocation to grow crops.

Field 1 Wheat & 2 Wheat had lower than anticipated removal rates, which was due to lower than expected yields. However, the applications to these fields matched the low removal rates and was able to meet the field ratio threshold of 1.4.

Nutrients applied to permanent crops, such as trees and vines, are used for tree growth, vine development and fruit production (grapes, nuts, etc.). Comparing nutrient applications to nutrient content of harvested material for permanent crops is not appropriate and will result in high field ratios. A more accurate reporting methodology will need to be developed in order to account for nutrients retained in the permanent crops. All applications will continue to be monitored closely to ensure that over application of nutrients does not occur.

Fields 1 & 2 Almonds received no wastewater or solid manure in 2023. All nutrients applied to these fields was contributed through freshwater applications and commercial fertilizer only.

A 3rd & 4th quarter wastewater sample was not taken due to no wastewater generation during these quarters or used for land applications. No water available for sampling.
